

# IMMUNIZATION

## in Colorado Schools (Statewide), 2017-2018

### Overview

Vaccines are a safe and effective way to prevent the spread of serious disease and keep children healthy as they grow. Each year in the US, vaccines save approximately 33,000 lives, prevent 14 million cases of disease, and save \$9.9 billion in direct healthcare costs.

All students and school staff members deserve a healthy school environment that supports their wellbeing and builds a strong foundation for learning. It takes an entire community to protect against serious disease. Because diseases such as measles can spread rapidly, adequate vaccination coverage at the school level -- roughly 95% for each vaccine -- helps to protect the health of students, staff and others in the community, including those who cannot be vaccinated for medical reasons or because they are still too young to receive vaccines. This is known as herd immunity or community protection.

### Did You Know?

**49<sup>th</sup>** Colorado ranks last among the 49 states that reported for kindergarten vaccination rates.

**9,424** Colorado kids were hospitalized or went to an emergency room with vaccine-preventable diseases in 2017.

**95%** of vaccine exemptions in Colorado are claimed for non-medical reasons.

**23,228** K-12 students entered Colorado schools in 2017-18 without protection from one or more vaccines.

### Why It Matters

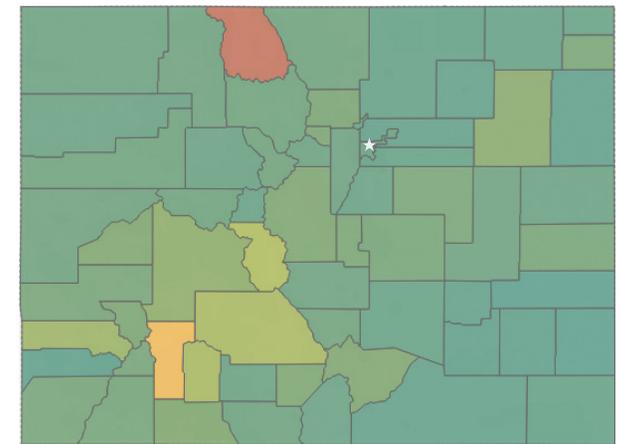

- Data show there is variation in vaccination coverage across the state. Areas of low vaccination put children -- especially young children -- and communities at risk for outbreaks, which can spread rapidly in school settings.
- State and local vaccination requirements for school entry are important tools for maintaining high vaccination coverage rates and, in turn, lower rates of dangerous and costly diseases.
- Research shows that states with lenient exemption policies, like Colorado, have higher exemption rates, which can lead to increased risk for vaccine-preventable disease outbreaks.
- Low vaccination rates can be an indicator that families may need help understanding which vaccines their children should have and/or where they can conveniently access free or low-cost vaccines.
- Ensuring high vaccination rates will reduce absenteeism linked to preventable disease in support of the Every Student Succeeds Act (ESSA).
- Research shows that schools with higher vaccination rates are more likely to have a school nurse supporting immunization efforts.

### Vaccination Reporting Policy

Per Colorado law and Board of Health Rule, all licensed schools and child care centers are required to report their immunization and exemption rate information annually to the Colorado Department of Public Health and Environment (CDPHE) to be made publicly available online.

To access the school immunization data, visit [www.colorado.gov/pacific/cdphe/school-and-child-care-immunization-data](http://www.colorado.gov/pacific/cdphe/school-and-child-care-immunization-data).

### County Level Rates of K-12 Children Fully Immunized with MMR (measles-mumps-rubella), 2017-18

58.8% 98.9%

This information can be viewed for each vaccine on the CDPHE school immunization data site.

### Percentage of All Colorado Schools That Meet Healthy People 2020 Goals for Vaccination Coverage, 2017-18

Vaccine/Disease	All K-12 Schools
MMR (Measles, Mumps, Rubella)	55%
Varicella (Chickenpox)	40%
DTaP (Diphtheria, Tetanus, Pertussis)	50%
HepB (Hepatitis B)	58%
Polio	53%
Tdap (Tetanus, Diphtheria, Pertussis)	28%

National Healthy People 2020 (HP 2020) goals are to reach **95% coverage for each vaccine.**

# IMMUNIZATION

## in Denver County School District No. 1, 2017-2018

### How Is My District Doing?\*

- The percent of students in Denver County School District 1 fully immunized for each vaccine ranges from 93%-95% depending on the specific vaccine.
- Exemption rates for any vaccine range from 0%-33.1% across individual schools, demonstrating high variability among schools within the district.
- 866 students in Denver County School District 1 are exempt from one or more school-required vaccines.
- 2,822 students in Denver County School District 1 have incomplete or missing records for one or more vaccines.

### What Does This Mean for Our Schools?

Vaccination is important to emergency response efforts and helps to prevent absenteeism, exclusions, and other societal and economic costs.

In the event of an outbreak, your school may be required to take measures to protect the student population or community at-large, such as excluding students. These lost days of school have impacts on a student's education and long-term success.

#### Case in Point:

Recent Colorado and national cases and outbreaks of vaccine-preventable diseases like measles, mumps, influenza, whooping cough and chickenpox highlight the importance of ensuring the children in Denver County School District 1 are fully immunized so that they, and the entire community around them, are protected from serious illness.

\*These data include both public and private schools.

Percentage of Denver County School District 1 Students Fully Immunized By Vaccine, 2017-18\*

Disease/Vaccine	Fully Immunized
Measles/ MMR	95%
Mumps/ MMR	95%
Rubella/ MMR	95%
Pertussis (Whooping Cough)/ DTaP	95%
Diphtheria/ DTaP	95%
Polio/ IPV	95%
Varicella (Chickenpox)/ VAR	93%

These levels of risk were determined using herd immunity thresholds for each disease in combination with the HP 2020 goals of 95%.

- Low Risk of Outbreak
- Moderate Risk of Outbreak
- High Risk of Outbreak

### What We Can Do Together

**REMIN**d students, families and staff of the importance of on-time vaccination and school vaccine requirements.

**BUILD RELATIONSHIPS** between school administrators, school nurses and local public health to meet state vaccination requirements.

**PARTNER** with other stakeholders to identify opportunities to deliver and/or improve access to vaccines for students, such as supporting school-based health centers and vaccination clinics.

**SEEK SUPPORT AND GUIDANCE** from your local public health agency and CDPHE regarding communicable disease control protocol.

**STAY INFORMED** of science-based immunization information, as well as what's happening with vaccine coverage rates and outbreaks in your community and beyond. Vaccine-preventable disease can spread quickly across regions.

**SUPPORT POLICIES** that encourage and support families in vaccinating their children and ensure appropriate funding for school nurses and resources that save time and money for schools, such as the Colorado Immunization Information System (CIIS).
